VACCINATION PROTOCOL

CANINE:

DHPP: Beginning at 6 weeks of age, initial vaccines will be given and continued every 3-4 weeks until 16 weeks of age. A booster will be given one year later and then every 3 years thereafter.

RABIES: An initial vaccination will be given at 12-13 weeks of age. A booster will be given one year later and then every 3 years thereafter.

LEPTOSPIROSIS (4-WAY): An initial vaccination will be given at 12-13 weeks of age. A booster vaccination will be given 3-4 weeks later and then yearly thereafter.

BORDETELLA (INTRANASAL): (Optional) Given every 6-12 months. (At least 1-2 weeks prior to boarding.)

LYME: (Optional) An initial vaccination is given at 12-16 weeks of age. A booster will be given 3-4 weeks later and then yearly thereafter.

INFLUENZA: An initial vaccination can be given at 8 weeks of age. A booster vaccination will be given 3-4 weeks later and then yearly thereafter.

****WE RECOMMEND DOING A 4DX/INSECT BORNE DISEASE TEST EVERY YEAR ****
