

HEARTWORM DISEASE

What are the signs of heartworm disease?

- The signs vary according to the number of worms present, stage of life cycle, age, and species of host. The heartworms live primarily in the right side of the heart and lung, and can cause significant damage and even death.

*****We Recommend Heartworm Prevention All Year Round**

*****We recommend doing an Insect Borne Disease Test (aka 4Dx) that takes only 8 minutes to analyze and get the results. All we need is a small sample of your pets blood.**

The 4 Diseases that we are checking for are:

- Ehrlichia – Caused by brown dog tick
- Lyme – Caused by ticks or coming in contact with deer/wild rodents
- Heartworm – Caused by infected mosquito's
- Anaplasma – Caused by ticks
